

WHO WATCHES THE SMART WATCHES?

Brian Moran

*Digital Strategy Consultant - BriMor Labs
Millersville, Maryland*

OCTOBER 26 2016

A Brief List of Topics

- Why use these confounded devices?
- Pebble Time
- UA Band
- Ways to protect your data
- Future research goals
- Q & A

The Introductory Introduction

- Hello, my name is Brian Moran
 - Hi Brian!
- 13 years Air Force Active Duty
 - 10 years mobile exploitation/DFIR experience
- Worked here....

Hardware Used

- Samsung Galaxy Note II (SCH-i605) – rooted
 - Running Android 4.4.2
- Pebble Time
 - Running 3.10
- UA Band
 - Running 1.17.1.14
- Microsoft Band 2
 - Running 2.0.4215.0 26R

The Microsoft Band is dead

Microsoft has ended sales of its fitness wearable

TRENDING STORIES

The Pixel phone is exactly what we wanted, so of course we're unhappy

Sad day on October 3, 2016

- Microsoft announced it was ending sales of the Band 2
 - SDK also removed
 - “No current plans for Band 3”
- Rather than cover a portion of my talk on (now) legacy hardware, purchased a UA Band to research same information
 - Only had a few weeks of data & research, there is definitely more to come!

But some good news for you

- The offline version of this presentation will also include the Band 2 slides
 - In case you encounter a Band 2 or were curious about it
- This presentation, however, will NOT cover the Band 2 at all

Software Used

- ES File Explorer app – Android
 - Version 4.0.4.5
- Pebble Time app – Android
 - Version 3.10.0-976-0c219e8
- UA Record app – Android
 - Version 3.9.0.1
- SQLite Spy
 - Version 1.9.6
- Hex Workshop
 - Version 6.8.0.5419
- Perl/Python

iOS data shout out

- Special thanks to likely 2017 Forensic 4Cast Awards “Digital Forensic Book of the Year” nominee Heather Mahalik for providing me Pebble related iOS data*
 - Let’s make this happen!

*Only cost me a couple pairs of LuLaRoe leggings & some Middleswarth chips

Heather Mahalik

Forensicating for us

Heather 2017

What Was NOT Used

- Cellebrite (*This is the Open Source Digital Forensics Conference*)
- During the course of this research, no lying dormant cyber pathogens were harmed

Why not Apple/Samsung/LG/etc.?

- Wanted to choose smartwatches that can be used regardless of brand of phone or phone operating system
- Pebble – Android, iOS, “unofficial official” Windows Phone
- UA Band – Android, iOS

Why use smart watches?

- Helpful notifications (especially when driving)

Peacock Leprechaun

..and you thought combining sharks and tornados was bad!!

Peacock Leprechaun

..and you thought combining sharks and tornados was bad!!

Why use smart watches?

- Fitness/workout tracking

Pebble Time Specs

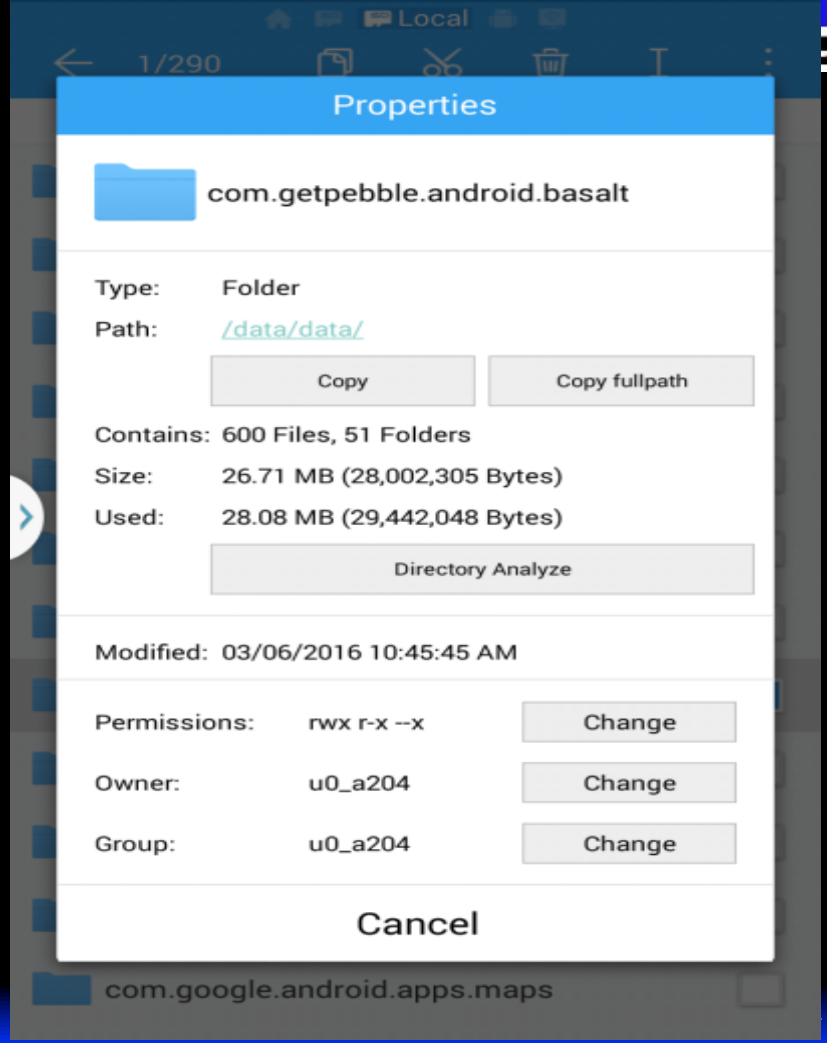

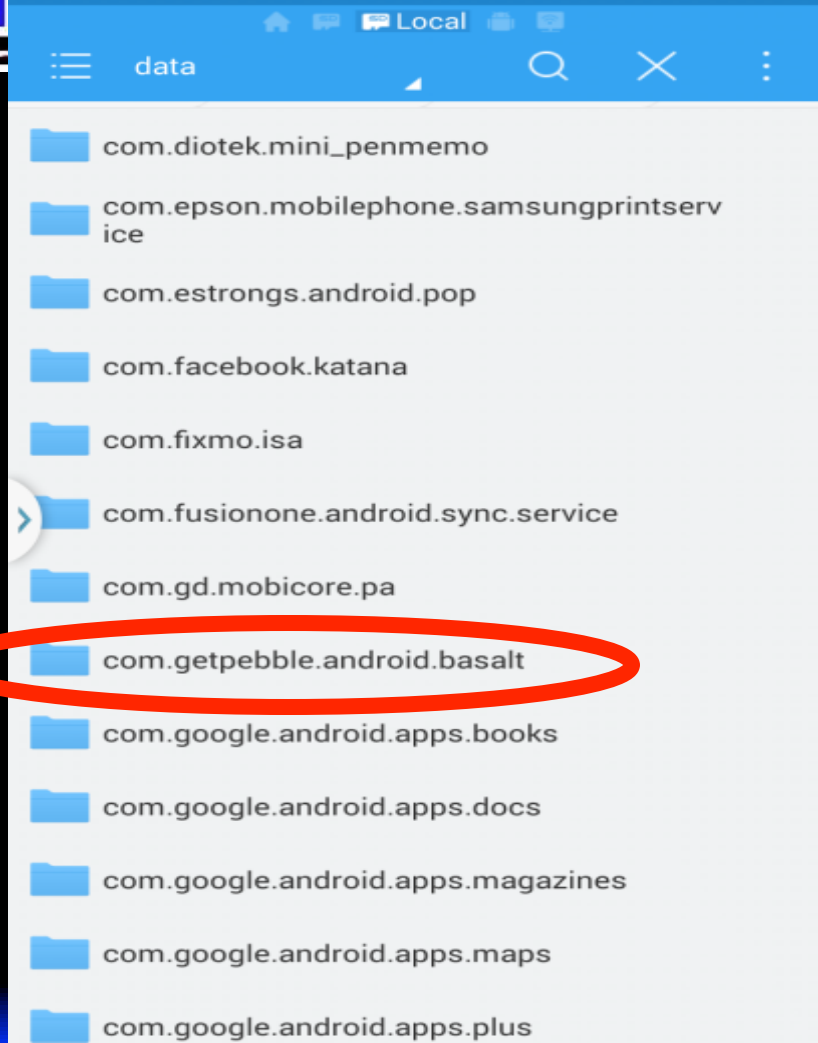

- **Processor:** ST Micro STM32F439ZG 180 MHz ARM Cortex-M4-based-MCU (100 MHz, single core)
- **Storage:** Spansion S29VS128R 128MB, 65 nm MirrorBit Flash
- **Display:** 1.25" color e-paper screen (144 x 168 pixels, 182 ppi)
- **Battery:** 150 mAh, (average battery life of 7 days)
- **Bluetooth:** TBD
- **Source:** <https://www.ifixit.com/Teardown/Pebble+Time+Teardown/42382>

Pebble Time storage (Android mobile device)

- Path: `/data/data/com.getpebble.android.basalt`
 - Make sure it is NOT “emulated”

Pebble Time storage (Android mobile device)

- “data\data\com.getpebble.android.basalt\DATABASES\pebble” is primary file of interest
 - SQLite database (as are most files on mobile devices these days)
 - Easy to view in any SQLite viewer or parse via scripting languages

| Name | Type |

Pebble Time storage

(Android mobile device)

- Table “android_apps” contains a listing of every application and application version installed on the device
- Information is obviously needed for notifications sent to Pebble
- Useful location if looking for an application/version

Pebble Time storage (Android mobile device)

- Table “notifications” contains a listing of every notification that happened on the mobile device
- Data is stored by Pebble app regardless of it being sent
- Can contain INCREDIBLY useful information
 - NOTE: Database does get cleaned when user chooses to clear all notifications

2016-03-03 22:47:04

Pebble Time storage (Android mobile device)

- SMS message notifications are stored under “notifications” table.
 - The “package_name” is bank, the “SOURCE” is “SMS”

Remember, this can potentially contain messages that were deleted from the phone, cannot be recovered through any other tool/mechanism but ARE stored within this database!

Under Armour Band Specs

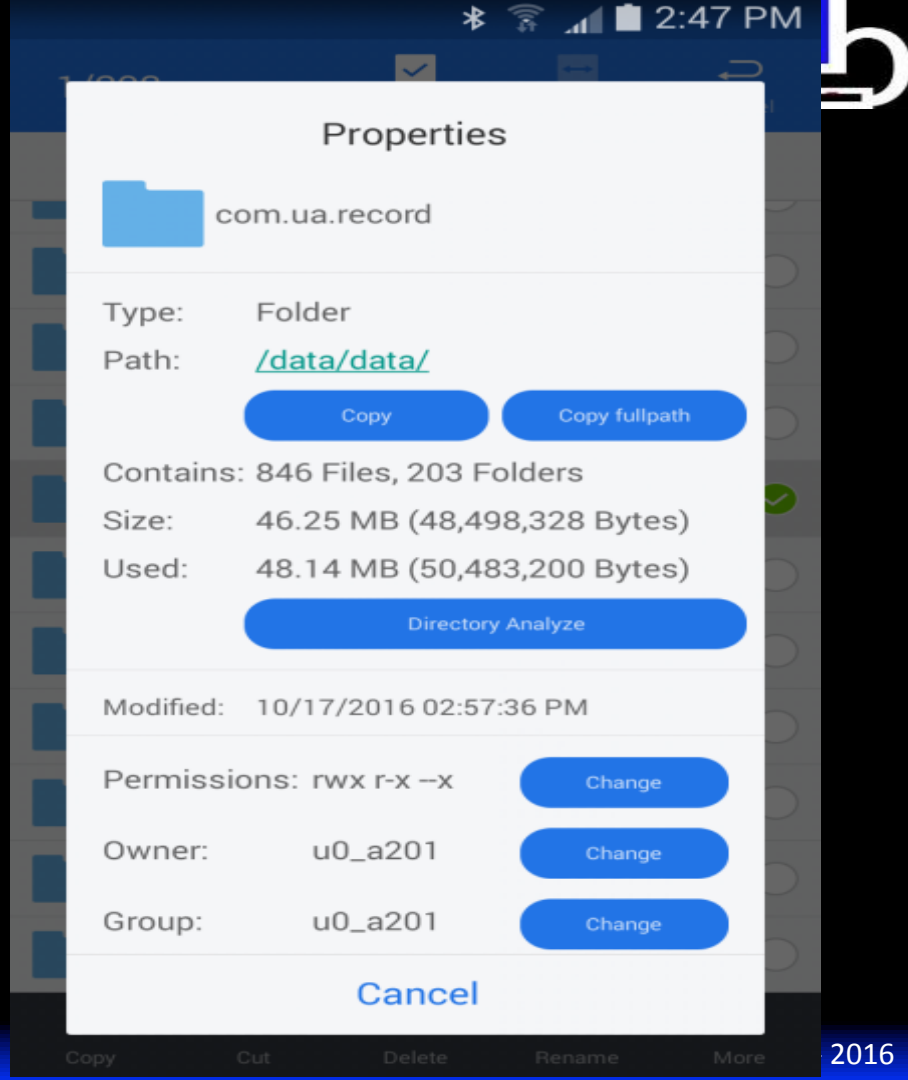

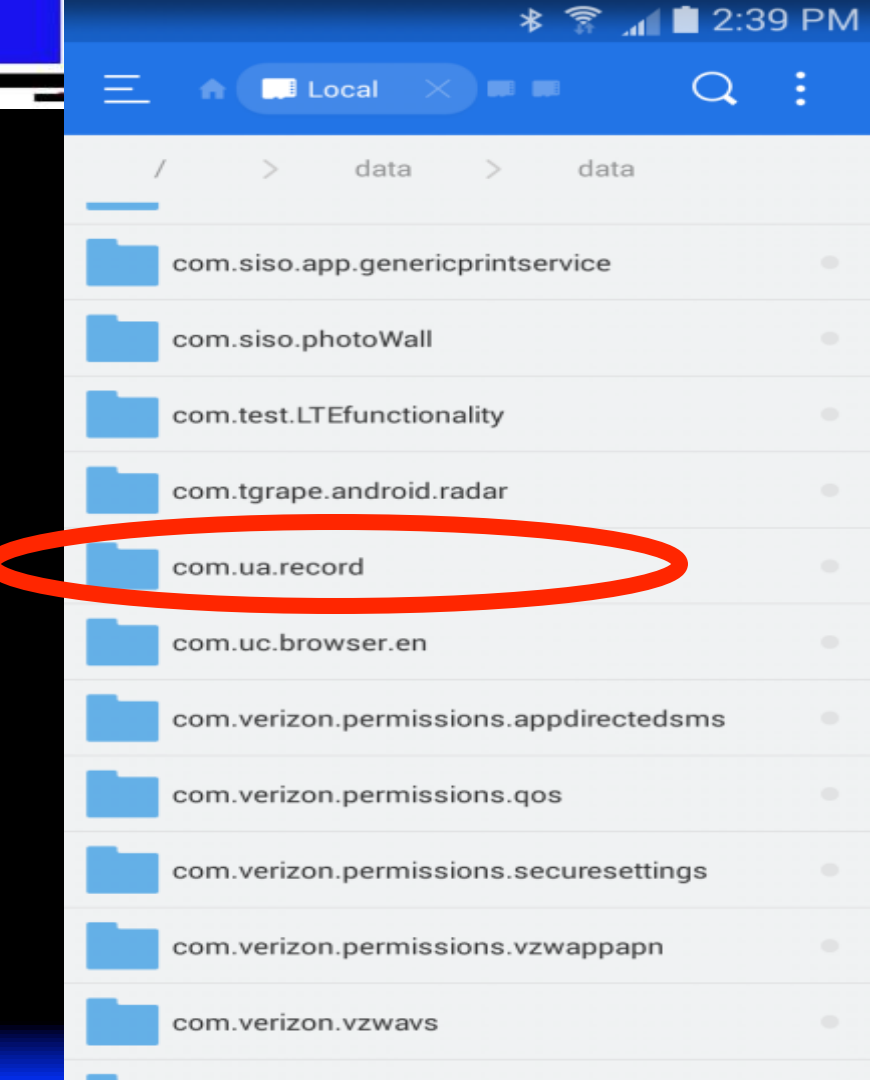

- Processor: ARM Cortex M4 MCU CPU
- Storage: 8MB onboard storage
- 1.3" PMOLED touchscreen
- Battery: 112 mAh battery (average battery life 5 days)
- Bluetooth: Bluetooth 4.0
- Source: <http://www.techradar.com/reviews/wearables/ua-band-1312190/review>

UA Band storage (Android mobile device)

- Path: `/data/data/com.ua.record`
 - Make sure it is NOT “emulated”

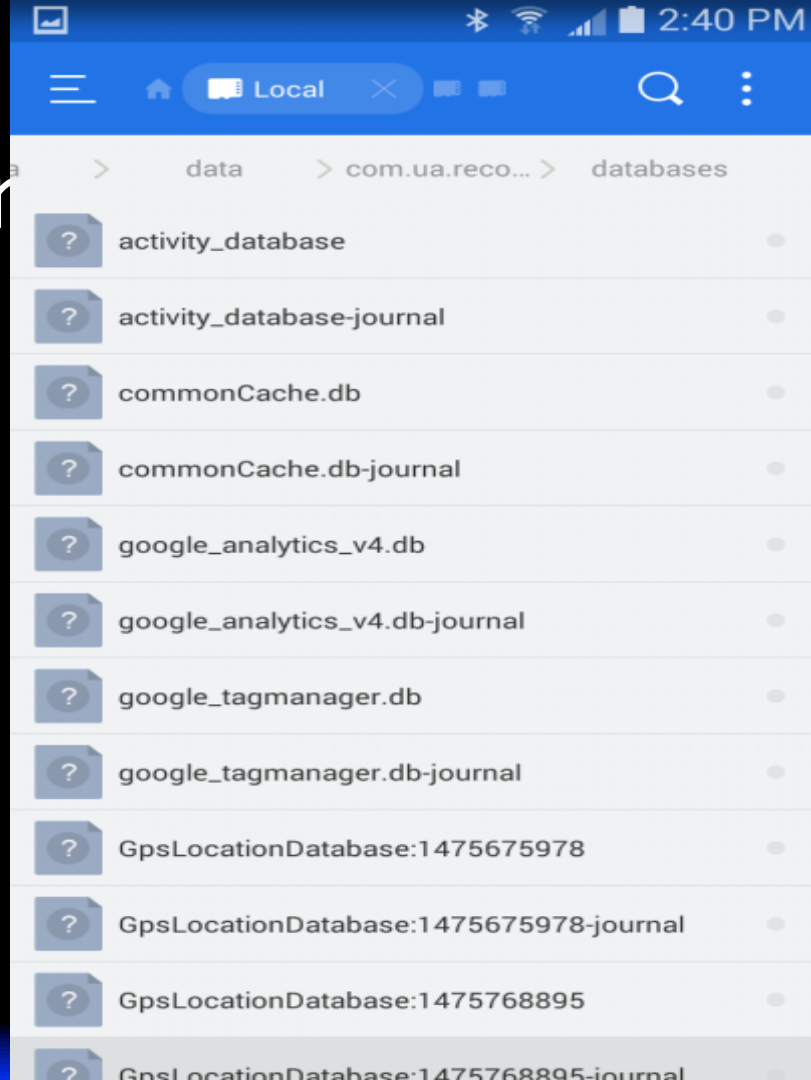

UA Band storage (Android mobile device)

- Primary folder of interest is “databases”
- Folder contains several SQLite databases with kind of easy to decipher names
 - Kind of

(Android)

UA Band storage (Android mobile device)

- SQLite databases of particular interest (to date):
 - commonCache.db
 - mmdk_user
 - usadk_workout
- As more research is done, it is likely more information will be found!

UA Band storage (Android mobile device)

- commonCache.db contains the following tables of primary interest
 - Data Point
 - Can record notes about meals, entirely dependent on user
 - MfpDailyEnergy
 - Can contain detailed calorie information bout meals

UA Record - website

- Limited information is available via the website
- Most of the functionality is in the app on the mobile device

UA Record - website

The screenshot displays the UA Record app interface. At the top, there's a navigation bar with tabs for 'Feed', 'Friends', 'Challenges', and 'Profile'. The 'Feed' tab is selected. Below the navigation bar, a user profile for 'Jessica Hyde' is shown, indicating the activity was posted '6 days ago'. The activity is titled 'Activity: Run - General'. It features three key metrics: 'DISTANCE' of 1.73 mi, 'AVG PACE' of 12:29 min/mi, and 'DURATION' of 00:21:36. Below these metrics, it shows '1 Like' and '4 Comments'. The comments section follows, with three visible entries: a comment from Brian Moran stating 'You already won the OSDFCon race. I'm only lethal over short distances!', a comment from Jessica Hyde saying 'I thought 1.73 was a short distance....', and another comment from Brian Moran replying 'Not short enough! (Also interesting to note, on the web interface there is a max of 1024 characters)'. The bottom of the screen shows a partially visible comment from Jessica Hyde: 'I suck at sports... I will try to get back into running soon'.

Brian Moran
You already won the OSDFCon race. I'm only lethal over short distances! 6 days ago

Jessica Hyde
I thought 1.73 was a short distance.... 6 days ago

Brian Moran
Not short enough! (Also interesting to note, on the web interface there is a max of 1024 characters) 🤔 6 days ago

Jessica Hyde
I suck at sports... I will try to get back into running soon 6 days ago

Entry viewed on UA Record app

NOTE: Average pace is 12:29

UA Record (Android app)

- Much more functionality
 - Many more options to do many more things
- One important note: “My Feed” does not appear to store any data on the device. So every time you want to see the feed, EVERYTHING gets downloaded again

UA Record (Android app)

A screenshot of the UA Record app interface. The top status bar shows Bluetooth, Wi-Fi, cellular signal, battery, and the time 3:10 PM. The app shows a run entry by Jessica Hyde, 6 days ago. The activity is 'Run'. The entry details are: Distance 1.73 mi, Avg Pace 0:12:30, and Duration 0:21:36. There are 1 like and 4 comments. The comments section shows three comments from Brian Moran and Jessica Hyde, all 6 days ago. The bottom of the screen shows a comment input field and a send button.

UA Record

(Android app)

- Almost all app data is stored in metric increments
 - Joules
 - Meters
 - Meters/second
 - And more
- This means things like pace/distance/weight/etc. can vary depending on how “ROUND” is computed on various platforms.

Important Take Away(s)

- Smart watches are essentially content notification devices
 - Require another device (mobile device) to “fully” work
- Most of the interesting data will be stored on the mobile device itself
- Connected apps/websites can have even MORE data!

Important Take Away(s)

- Timestamps are dependent on exact time on device/platform being analyzed & unit conversion(s)
- Trust the raw data, but be prepared for slight time skew
- No current method to “secure” most smart watches
 - It pains me to say this, but it is one thing that Apple got right

Important Take Away(s)

- If you are going to do something bad, don't wear a smartwatch/fitness tracker
- Additionally, if you are going to lie about something bad happening to you, don't wear a smartwatch/fitness tracker

Prosecutors Say Fitbit Device Exposed Fibbing in Rape Case

PHOTO: THE WALL STREET JOURNAL

0 COMMENTS

Data has always been a double-edged sword. The convenience, efficiency and knowledge on one side and privacy fears, surveillance concerns and cybercrime on the other.

An officer at the scene spotted a Fitbit device on the floor of a hallway. During the investigation, she “agreed to provide [police] with her fitbit user name and password as well as the dongle to download the data off” the device, [an arrest affidavit states](#).

Prosecutors say the Fitbit caught her fibbing. According to the affidavit:

The information collected from the fit bit [sic] device showed that Nina was awake and walking around the entire night prior to the incident and did not go to bed as reported. The Fitbit shows activity up until the time of the call and then again only when it is collected by your Affiant. That based on the above and additional evidence your Affiant believes that the Defendant Nina Risley was not raped as reported and fabricated the entire incident.

The Fitbit evidence “definitely turned the case,” Brett Hambright, a spokesman for the Lancaster County district attorney’s office, told Law Blog.

Protecting your data

- Only turn on notifications you want to record
 - NOTE: iOS will not allow the user to modify some notification settings
- Open Pebble app on mobile device
 - Navigate to “Notifications”
 - Select “View All Apps”
 - Change slider from blue (on) to gray (off) accordingly

Protecting your data

- Clear notifications on a regular basis
- On Pebble device,
 - Navigate to “Notifications”
 - Select “Clear All”
- NOTE: You must have at least one notification on the Pebble device to clear the SQLite table on the mobile device

Protecting your data

Protecting your data

- Use strong password(s) for your accounts
- Don't reuse passwords - Especially for 2nd/3rd party apps

Data parsing scripts

- <https://github.com/brimorlabs>
 - `allyourpebblearebelongtous.pl`
 - Released June 2016
 - `allyouruarecordarebelongtous.pl`
 - Released October 2016
- Why Perl?
 - Easier (for me)
 - Want companies (Cellebrite) to at least do a little work to make money off of open source research ☺

allyourpebblearebelongtous.pl

- Give the script a pebble database & output folder and let it run
- Tries to figure out if it is iOS or android & parses data accordingly

NOW FEATURING IOS
PARSING CAPABILITIES!!

allyourpebblearebelongtous.pl

```
C:\Users\Brian\Desktop>allyourpebblearebelongtous.pl -file pebble -output Notel
I-Pebble

Processing C:\Users\Brian\Desktop\pebble

Good news everyone!!
This looks like a pebble database, so we will proceed

Good news everyone!!
The table "android_apps" exists in this database. Beginning to parse data now.
The parsing of the table "android_apps" has completed. Moving on to next table n
ow.

Good news everyone!!
The table "notifications" exists in this database. Beginning to parse data now.

Future development (DEPENDENT ON FREE TIME)

- Collect more data and do more experimentation
 - Capturing traffic to/from smart watches is <STILL> my next goal
- Expand to other smart watches & fitness trackers(maybe?)
 - Fitbit & Garmin are intriguing

Microsoft Band 2 Specs

- Processor: ARM Cortex M4 MCU CPU
- Storage: 64MB onboard storage
- AMOLED Gorilla Glass 3 screen, 12.8mm x 32mm (0.5" x 1.25"), 320 x 128 pixels, 255ppi
- Battery: Lithium Polymer battery (average battery life 48 hours)
- Bluetooth: Bluetooth 4.0
- GPS
- Source: <http://www.pcadvisor.co.uk/review/activity-trackers/microsoft-band-vs-band-2-comparison-3626883/#productSpecificationFull>

Microsoft Band 2 storage (Android mobile device)

- Path: /data/data/com.microsoft.kapp
 - Make sure it is NOT “emulated”

Microsoft Band 2 storage (Android mobile device)

- Primary folder of interest is “responseCache”
 - Found under “com.microsoft.kapp/files”
- Folder contains files in json format with GUID type names
 - Names correlate to entries in SQLite database “cache.sqlite” found under the path “com.microsoft.kapp/databases”
 - IMPORTANT NOTE: Not all names have an entry, depending on Band usage

Microsoft Band 2 storage (Android mobile device)

- Data in SQLite database notes a file related to “Golf” is stored as “/data/data/com.microsoft.kapp/files/responseCache/9524a205-d3d6-4d7c-ad31-cbfba2e25840”

Microsoft Band 2 storage (Android mobile device)

- Highlights
 - Distance is stored in “cm”
 - Par was 71
 - Total score was 85
 - Scored par or better on 10 holes

(Had a good front nine (+2), but ran into trouble on the back. Not too bad all in all considering I had a torn labrum in my hip)

Raw sleep data on mobile device

Microsoft Health - website

Sleep data viewed on Microsoft Health website
NOTE: Asleep at 12:04AM

Microsoft Health app

Sleep data viewed on Microsoft Health app

NOTE: Asleep at 12:05 AM

Future development (DEPENDENT ON FREE TIME)

- Check out a post by b0nb0n on jailbreaking the Microsoft fitness band
 - <http://www.b0n0n.com/2016/04/20/ms-jailbreak/>
- *NOTE: This was done with the original Microsoft Band, my limited testing has been unsuccessful thus far on the Band 2*
